

Ci CLOUD INFRASTRUCTURE

Every organization is on its own path to the cloud.

That's why all of our cloud infrastructure services are customized to fit your business requirements, IT goals, and your current cloud adoption maturity.

Whether you are managing legacy infrastructure or running containerized applications, our proven cloud adoption methodology puts your key constituents at the center, removes risk and accelerates your business by implementing the most advanced cloud services offered by Google Cloud Platform (GCP) considering availability, security, and automation.

Migrate

- + Lift & Shift
- + Platform Services
- + Database Migration
- + Managed Services

Refactor / Replatform

- + Specification Analysis
- + Refactor Definitions
- + Solution Visioning
- + Roadmaps

Modernize & Integrate

- + Infrastructure Automation
- + Database Modernization
- + Container Adoption
- + Platform Services

CLOUD IMPACT ASSESSMENT

Our proven migration methodology kicks off with a cloud impact assessment to evaluate cloud readiness (if not already in the cloud) or cloud impact (if migrating from other private or public clouds) through asset discovery, real-time analytics, qualitative and quantitative analysis, reporting, and risk considerations.

MIGRATE

We help you determine what, where, when, and how to transition existing infrastructure to the cloud. This service is the best fit for companies with legacy & highly performant workloads in existing data centers, virtual private clouds, or competitive public clouds. Migrate existing infrastructure into Google Cloud to reduce operating costs, improve availability, add capabilities and improve your security profile.

START Cloud assessment and planning to evaluate cloud readiness and cloud impact.

PLAN Cloud workload requirements analysis and modeling.

BUILD Configure and validate each Roadmap flight as defined and planned.

DEPLOY Schedule migration planning with pre-flight and go-live support.

OPTIMIZE Monitor infrastructure with dashboards, on-going support & billing optimization.

PHASE 1: Discovery, Data Collection & Inventory Analysis

We collect data from the target workloads and complete an inventory analysis. Our agentless collector gathers the following information.

- + Infrastructure Discovery
- + Inventory Analysis
- + Cloud-fit Analysis
- + VM Right Sizing
- + Cloud Pricing

PHASE 2: Cloud Readiness, Cloud Fit & Financial Analysis

We analyze the data collected in Phase 1 to provide insights into cloud readiness, consumption strategies, and potential savings by moving to GCP.

- + Cloud Spend Estimates
- + Cloud Readiness Scoring
Per Workload
- + Best Fit Vendor-Product
Match

REPLATFORM & REFACTOR

We help you identify target applications that are a good fit to replatform and optimize in the cloud. This service is a good fit for companies looking to take advantage of cloud-native frameworks and functionality to ultimately spend less time and money maintaining infrastructure, and more time investing.

MODERNIZE & INTEGRATE

We help you leverage machine learning, IoT and automation to build new or modernize existing applications quickly in the cloud. This service is the best fit for companies leveraging the public cloud for business innovation. Agosto works in a phased approach to build a proof of concept that helps you gain unique insights, identify patterns, showcase an idea, or develop an early proof to gain traction for future project approval.

AGOSTO'S EXPERIENCE

Agosto is a Google Premier Partner and cloud development company that helps businesses modernize and innovate in the cloud to solve complex problems. Our private and public sector customers rely on Agosto services for cloud infrastructure, IoT rapid prototyping, machine learning, productivity tools, and cloud native app development.
